1.   An examiner's amendment to the record appears below. Should the changes

and/or additions be unacceptable to applicant, an amendment may be filed as provided

by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be

submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview

with A. Dougherty on 2/12/09.

2.   The application has been amended as follows: The claims are amended as

follows.

1.   (currently amended) A portable wireless web server for

serving data, the wireless web server comprising:

        a) a web server component comprising ~~a processing~~

        ~~component for executing application and for generating~~

        ~~internet messages and~~ at least one storage location for

        storing _instructions_ ~~applications~~ and data _and processor_

        means for generating TCP/IP internet messages; and

    b) a wireless communications interface _comprising a_

        packet handling unit for assembling TCP/IP internet

        messages received from the processor means into data

        packets according to a Cellular Digital Packet Data

        networking   protocol,   said   wireless   communications

        interface being operable to convey said _data packets_

~~internet messages~~ to and from the wireless web server

using a wireless digital packet network.

2-5. (canceled)

6. (currently amended) The wireless web server of claim **1**
wherein said communications interface is operable to
transmit and receive said <u>data packets</u> ~~internet messages~~ on
<u>the</u> [[a]] cellular digital packet network.

7. (canceled)

8. (currently amended) The wireless web server of claim <u>1</u> **7**
wherein said communications interface is operable to
transmit said <u>data packets</u> ~~internet messages~~ according to
the TCP/IP protocol to said web server <u>component</u>.

9. (currently amended) The wireless web server of claim **1**
wherein said communications interface comprises a wireless
transceiver for transmitting and receiving said <u>data</u>
<u>packets</u> ~~internet messages~~ on said wireless digital packet
network.

10.   (currently amended) The wireless web server component of
      claim **1** wherein said web server is operable to receive and
      store data to be served.

11.   (previously presented) The wireless web server of claim **1**
      further including an input interface operable to receive a
      signal from a sensor and produce a data representation of
      said signal, for storage as data to be served by said
      wireless web server.

12.   (currently amended) A method of serving data from a
      portable wireless web server having a web server component
      comprising a <u>processor means for generating TCP/IP internet
      messages</u> ~~processing component for executing applications
      and for generating internet messages~~, at least one storage
      location for storing <u>instructions</u> ~~applications~~ and data and
      a wireless communications interface <u>comprising a packet
      handling unit for assembling TCP/IP internet messages into
      data packets according to a Cellular Digital Packet Data
      networking protocol, said wireless communications interface
      being</u> operable to convey <u>data packets</u> ~~internet messages~~ to

and from the web server using a wireless digital packet
network, the method comprising:

a)   receiving at said wireless web server a data request
      message from a wireless digital packet network;

b)   assembling TCP/IP internet messages into data packets
      ~~executing at least one application at said processing~~
      ~~component of the web server component~~ in response to
      said data request message; and

c)   transmitting on said wireless digital packet network a
      response message including data <u>packets</u> produced by
      said wireless web server in response to said data
      request message.

13.   (currently amended) The method of claim **12**, further
       comprising extracting a Transmission and Control Protocol
       (TCP/IP) message from [[a]] <u>said</u> wireless digital packet
       network ~~protocol~~ message.

14.   (original) The method of claim **13** further comprising
       transmitting said TCP/IP message to said wireless web
       server.

15.   (currently   amended)   The   method   of   claim   **12**   further

comprising   inserting   a   Transmission   and   Control

Protocol/Internet   Protocol   (TCP/IP)   message   from   said

wireless web server into a wireless digital packet network

protocol data packet ~~message~~ for transmission on said

wireless digital packet network.

16-18.   (canceled)

19. (currently amended)   The method of claim **12** wherein the

wireless web server ~~is adapted to~~ receives signals from at

least one sensor and wherein said packet handling unit

assembles data packets in response to receipt of said

signals ~~processing component executes an application to~~

~~process said signals~~.

3.   Any inquiry concerning this communication or earlier communications from the

examiner should be directed to AJIT PATEL whose telephone number is (571)272-

3140. The examiner can normally be reached on MON-FRI.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, PAUL HARPER can be reached on 571-272-7605. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
